

# MWANGOKA FARM NATURAL

TANZANIA GREEN COFFEE | GENUINE ORIGIN

## Coffee Details

### ORIGIN

Mbozi District, Songwe,  
Tanzania

### PRODUCER

GD Mwangoka Farm,  
Grivas D. Mwangoka

### PROCESSING

Natural

### HARVEST SCHEDULE

July - October

### VARIETY

Bourbon, Compact

### ALTITUDE (MASL)

1450 - 1850

## Coffee Background

Only around 5% of Tanzania green coffee is grown on large estates, and GDM Farm is one of the very few Tanzanian-owned properties in the Mbozi area. The farm is situated at an altitude of 1980msl in the southern highlands near the Mbozi meteorite that was discovered in the 1930s.

The Grivas family purchased GDM in 2000, and Richard Grivas, son of the estate's founding father, now supervises the farm. For the past 20+ years, GDM has employed over 200 seasonal workers and supported local smallholders in the surrounding area. Richard has his sights on taking coffee quality a step further with unusual processing methods rarely applied to Tanzania coffee. This natural or dry process green coffee offers roasters a taste of what Tanzania has to offer.

GDM spans 400 hectares and primarily cultivates Bourbon and compact coffee trees. Cherries are hand-picked and hand-sorted for ripeness, then dried on raised beds for around 21 days. There is also a dry mill on the estate where workers deliver dried cherries for further processing.
